## Hospital of South Bend

January 9, 1996

To Whom It May Concern:

We have an ice machine in our Open Heart/Recovery Unit that was producing "green" ice due to bacteria build-up in the water lines. We have tried other water filtration systems but the situation remained unchanged. We are finally forced to shut the machine down and carry in ice from other areas of the hospital.

We then had a Hydro Life Water Filtration System installed and the bacteria was cleaned up **immediately!** We are so pleased with the results of the Hydro Life Water Filter, we are recommending it to others.

Thank you for providing us with a water filtration system that **really works!** We look forward to doing more business with you in the future.

Sincerely,

A handwritten signature in cursive script that reads "Fred Kominowski".

Fred Kominowski
